The Force Wool Technical Warm Climate sock is designed with those who spend a lot of time outdoors in mind, especially on cool days, whether working in the open air or enjoying a long hike in nature. With an ideal blend of 60% wool and durable synthetic materials, the sock offers both warmth and comfort throughout the day. The terry-knitted sock provides a soft, breathable, and extra-padded effect, along with additional comfort and cushioning.

The sock has a mid-height design, ideal for use with high-cuffed shoes. Seamlessly knitted with reinforcement at the toe and heel, combined with extra elastic over the instep, it ensures a good fit on the foot. Such a knitting method, along with the selected quality, minimizes the risk of blisters and will keep your feet dry and warm. It is an ideal sock for cool days, worn directly on the skin or over a thin liner sock for added insulation.

The sock is knitted with a stitch size of 21 microns, providing good durability and elasticity while offering excellent support. Our wool is RWS-certified, the material is Oeko-Tex certified, and mulesing-free, ensuring a sustainable product choice.

Technical description: 60% Wool, 28% Polyamid, 10% Viscose, 2 % Elastane.

Machine wash at 60 degrees on a wool cycle. Use a detergent specifically formulated for wool and silk. Do not iron, bleach or dry clean. Tumble dry (Low temperature).
